

Your Renewable Energy Partner

POWER of the SUN² SOLAR is a premier renewable energy integrator providing off-grid, microFIT, pool heating and solar lighting systems to residential and commercial clients across Southern Ontario and Cottage Country.

A Division of Jet-Tel Solutions, we have been providing technology solutions to Canadian organizations since 1998. A 100% Canadian-owned and operated company, our management team has worked together for 20 years with eleven years in solar design, installation and customer support.

We're passionate about renewable energy and its ability to reduce CO₂ emissions and lower your utility bills.

As your renewable energy partner:

- customers are assured of premium products, precision systems engineering, and professional installation by accredited installers.
- our solar products are market leaders in energy efficiency and lifecycle durability
- you'll harvest the most power from the sun to maximize cash flow and ROI.

"Two years ago Power of the Sun² Solar, installed our solar panels. They were the ONLY company that was willing to come out to our home and give us a "realistic" projection on the kind of \$\$\$ we would make...They were the ONLY company to do every step, including applying to the OPA. ...We would highly recommend Power of the Sun² Solar over ANY other company." - Wayne & Kathy P., Hillsdale

"We've been very happy with our 10 kW solar system from Power of the Sun². Their installation crew was very professional with great workmanship. Our installation was finished on time and everything was cleaned up pronto. I have recommended Power of the Sun² to my friends who are looking at having their own solar system installed next spring." - Joseph S., Tottenham

If you are looking for a renewable energy company that delivers results and meets your project expectations, give us a call at 1-866-300-8224 or 416-840-3324 in the GTA.

Why Solar Energy ?

Solar is a sustainable, renewable and affordable clean energy option to power your home, cottage or business. With product warranties up to

25 years, solar will produce clean, low-cost energy for decades, regardless of stock market or exchange rate volatility. This presents a significant investment opportunity for homeowners, cottagers, farmers and small business owners interested in becoming a more independent green power producer, or businesses that need a lot of hot water.

With Ontario's microFIT and Feed-In-Tariff (FIT) incentive programs, solar photovoltaic (PV) systems also cushion against rising utility rates while providing a reasonable investment return over a 20 year contract.

And best of all, a solar investment will help you do your part in reducing harmful CO₂ emissions, protecting the environment, and developing a new source of Ontario jobs. It is win-win for Ontario investors, businesses and communities.

"As the owner of 2 x10 kW microFIT systems, I am very satisfied with the work Power of the Sun has done...I sure would use their services again." - Harry D., Owner and Operator of Green Thumb Gardens, Caledon

Off-Grid Systems

Whether you have a farm, acreage, summer retreat, camp, cabin, or island cottage, off-grid living is becoming a reality for thousands of Canadians.

With off-grid power, you are your own electricity company. When the sun shines, an off-grid inverter converts the DC power from the solar array to AC power that powers normal appliances, lights, and pumps. You store excess electricity in batteries for night-time or overcast days.

Solar Pool Heating

More Canadians are making their backyards into week end playgrounds with outdoor kitchens, swimming pools and hot tubs. So a solar water heating system makes more financial, lifestyle and environmental sense for a variety of home and cottage applications.

Ontario's microFIT Program

The microFIT program is for residential solar installations of 10 kilowatt (kW) or less. All of the electricity produced from your rooftop solar system is then purchased by the local utility at a guaranteed rate/kWh for 20 years by the Ontario Power Authority.

While you are still charged for your monthly electricity consumption, you will receive an offsetting monthly payment from your local utility company for the solar power generated. Applications to the microFIT Program are processed by OPA in about 4 weeks.

BIPV Solar Shingles (Building Integrated Photovoltaics)

Solar-powered shingles blend almost seamlessly with traditional roofing materials.

Electricity is generated when sunshine strikes a semi-conductor layer laminated to the shingle's surface. Output is typically 10 watts DC per square foot - enough to power your backyard lighting, irrigation pumps, or outdoor appliances. No racking is required and solar shingles come with a 10 year warranty.

POTS - PowerHub Backup Module

The POTS-PowerHub is an inverter/charger module that delivers up to 1,800 watts to run 110V/220V appliances, TV's, laptops, fans, lighting or heaters. With two DC inputs, the PowerHub can be charged by solar PV, wind, generator or grid power. Modules are scalable to 4,800 watts of power.

The PowerHub's small footprint and quiet, reliable operation makes it ideal for home and cottage power backup.

Solar Lighting

We are now offering a range of motion-sensing solar lighting for your backyard, pool, deck or pathway. Let us design a system for you.
